

British Society of Breast Radiology

PRIORITY-BC - Help us shape the next generation of breast cancer trials focussing on treatment!

Research is vital to improving breast cancer outcomes, but it is essential that research studies ask questions that patients and clinicians think are important and are designed to reflect clinical practice so they are feasible and can recruit in busy units.

PRIORITY BC is a rapid multidisciplinary priority setting exercise that aims to develop and deliver the next generation of breast cancer trials ensuring that they are meaningful, deliverable and can and will change practice to improve outcomes for patients.

The project is being led jointly by the Royal College of Surgeons Surgical Speciality Leads, UKBI and the UK Breast Cancer Clinical Studies group with the support of support of the professional associations, the Association of Breast Surgery (ABS), UK Breast Cancer Group (UKBCG), British Society of Breast Radiology (BSBR), Symposium Mammographicum, the Association of Breast Pathology (ABP) and Independent Cancer Patients' Voice (ICPV).

We want clinicians who are involved in treating patients with early breast cancer to help us decide what areas the next generation of breast cancer trials should focus on in terms of breast cancer treatment – surgical or adjuvant treatments. As professionals working with patients every day, you are ideally placed to tell us where you think research is needed.

We want your help to work out what should the next big trials that NIHR should consider funding in early breast cancer. What trials do we and our patients need?

We are interested in research questions relating to all aspects of the management of early breast cancer including surgery, systemic therapy, radiotherapy, endocrine therapy, CDK4/6 inhibitors, targeted treatments, omitting treatments and supportive care or management of complications.

Please take a few minutes to submit your ideas and help us shape the future breast cancer research agenda via the following link:

<https://www.surveymonkey.com/r/prioritybc>

There is also the opportunity for you to get involved in developing future studies and become a trialist of the future.

Please get involved!

Many thanks and best wishes,

The PRIORITY-BC team
